DETAILED ACTION

Applicant's election with traverse of Group I, Specie I (claims 1-22, figure 3) in the reply filed on 11/24/04 is acknowledged. The traversal is on the ground(s) that the process as claimed is not an obvious process of making the product and Specie II-V also read on claims 1-22. This is not found persuasive because (a) Group II of claims 23-26 recited a method fabricating a circuit having a step of "screening the resistive element onto the layer of the circuit board." However, the method can be made in vary by different process such as adhesive or solder the resistive element onto the circuit board. (b) Species I-V have different embodiment as described in a specification, pages 3-4; therefore they are distinct patentably inventions.

Because the application still contains claims directed to the following patentably distinct of the claimed inventions as shown below:

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-11, drawn to a resistive element, classified in class 338, subclass 306.
 - II. Claims 12-22, drawn to a circuit board and a circuit package, classified in class 361, subclass 766.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination has separate utility such as a control board or a control circuit package. The subcombination has separate utility such as a positive therasac (PTC) or a joystick controller.

2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
3. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.
4. A telephone call was made to Ann M. McCrackin on 04/01/05 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

Art Unit: 2841

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
